

Where and when do bass spawn?

NONNATIVE FISH

Smallmouth bass
(*Micropterus dolomieu*)

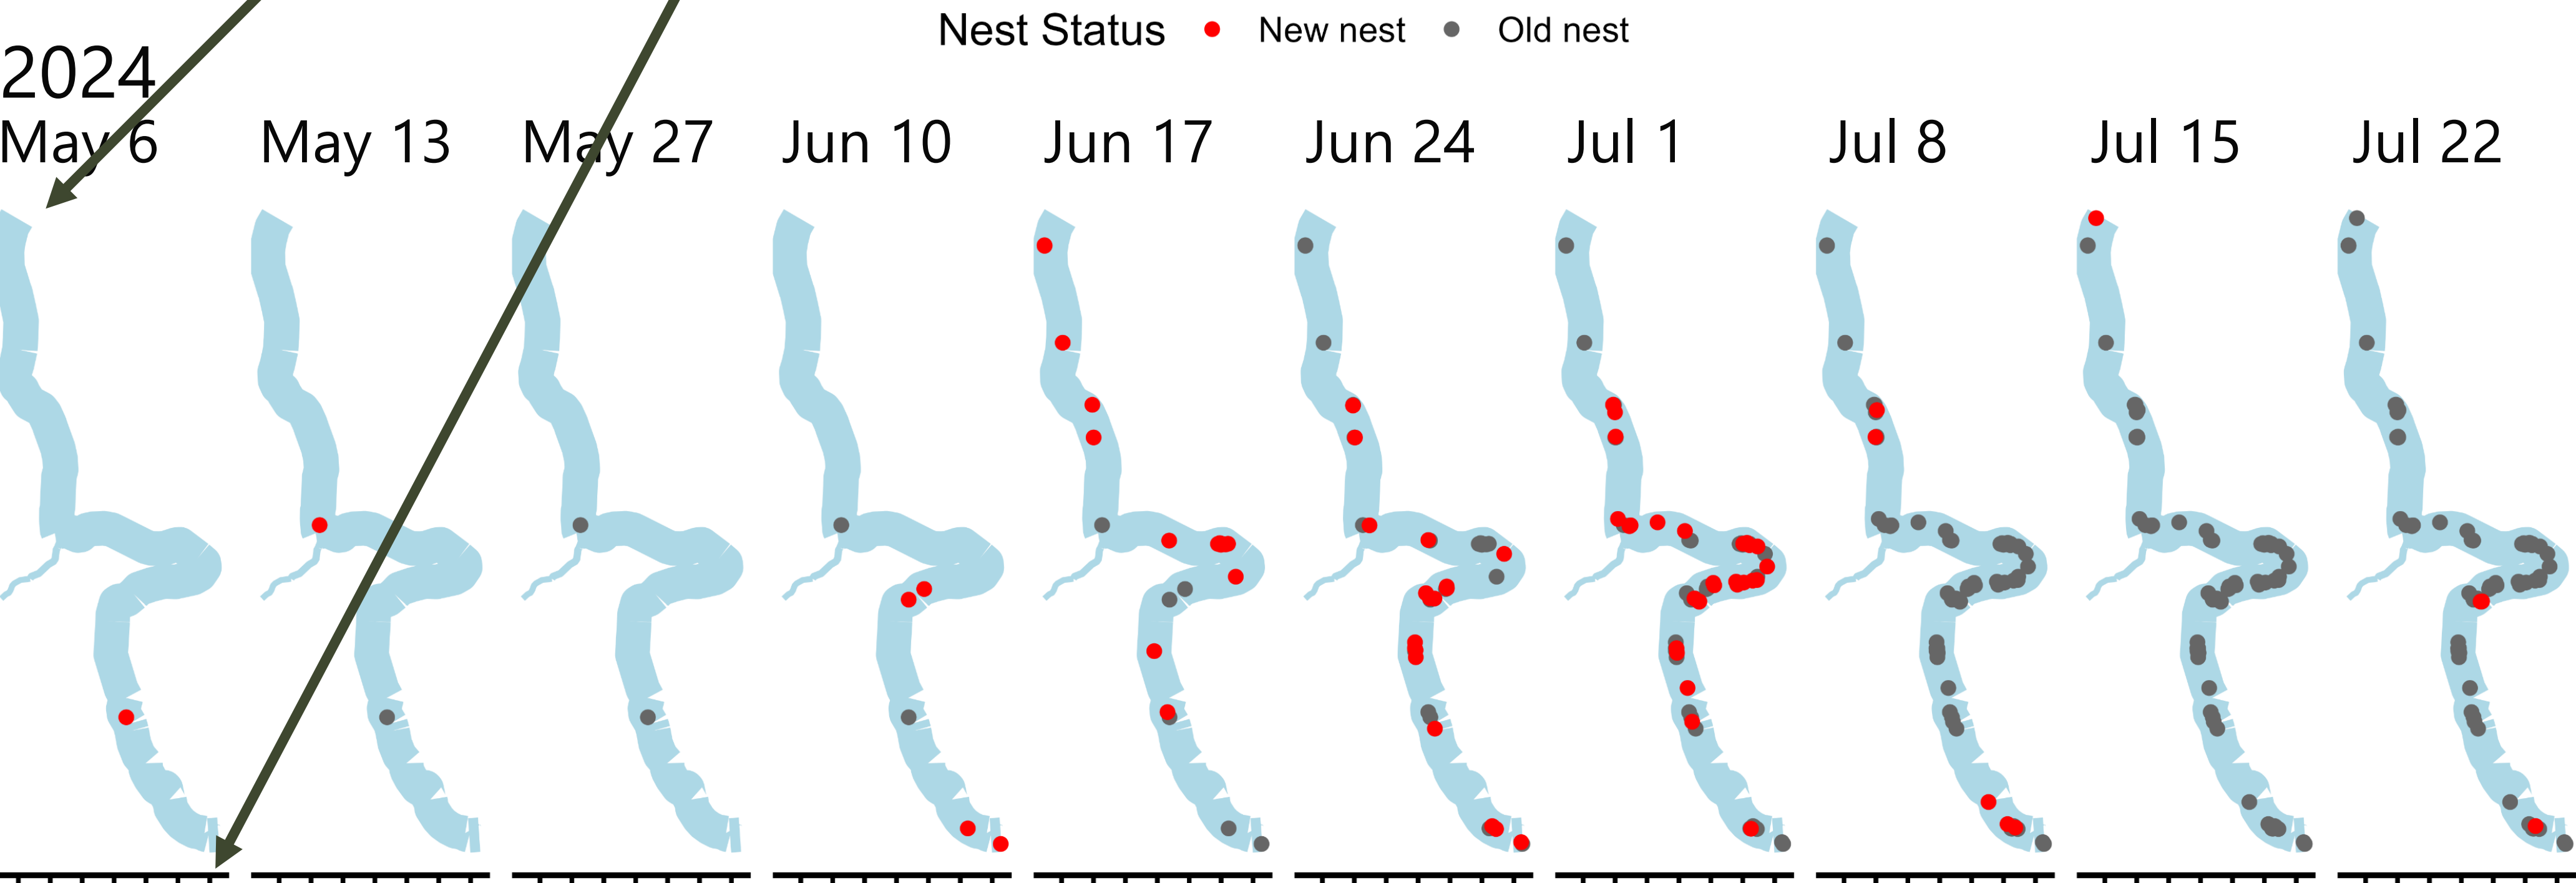

Largemouth bass
(*Micropterus salmoides*)

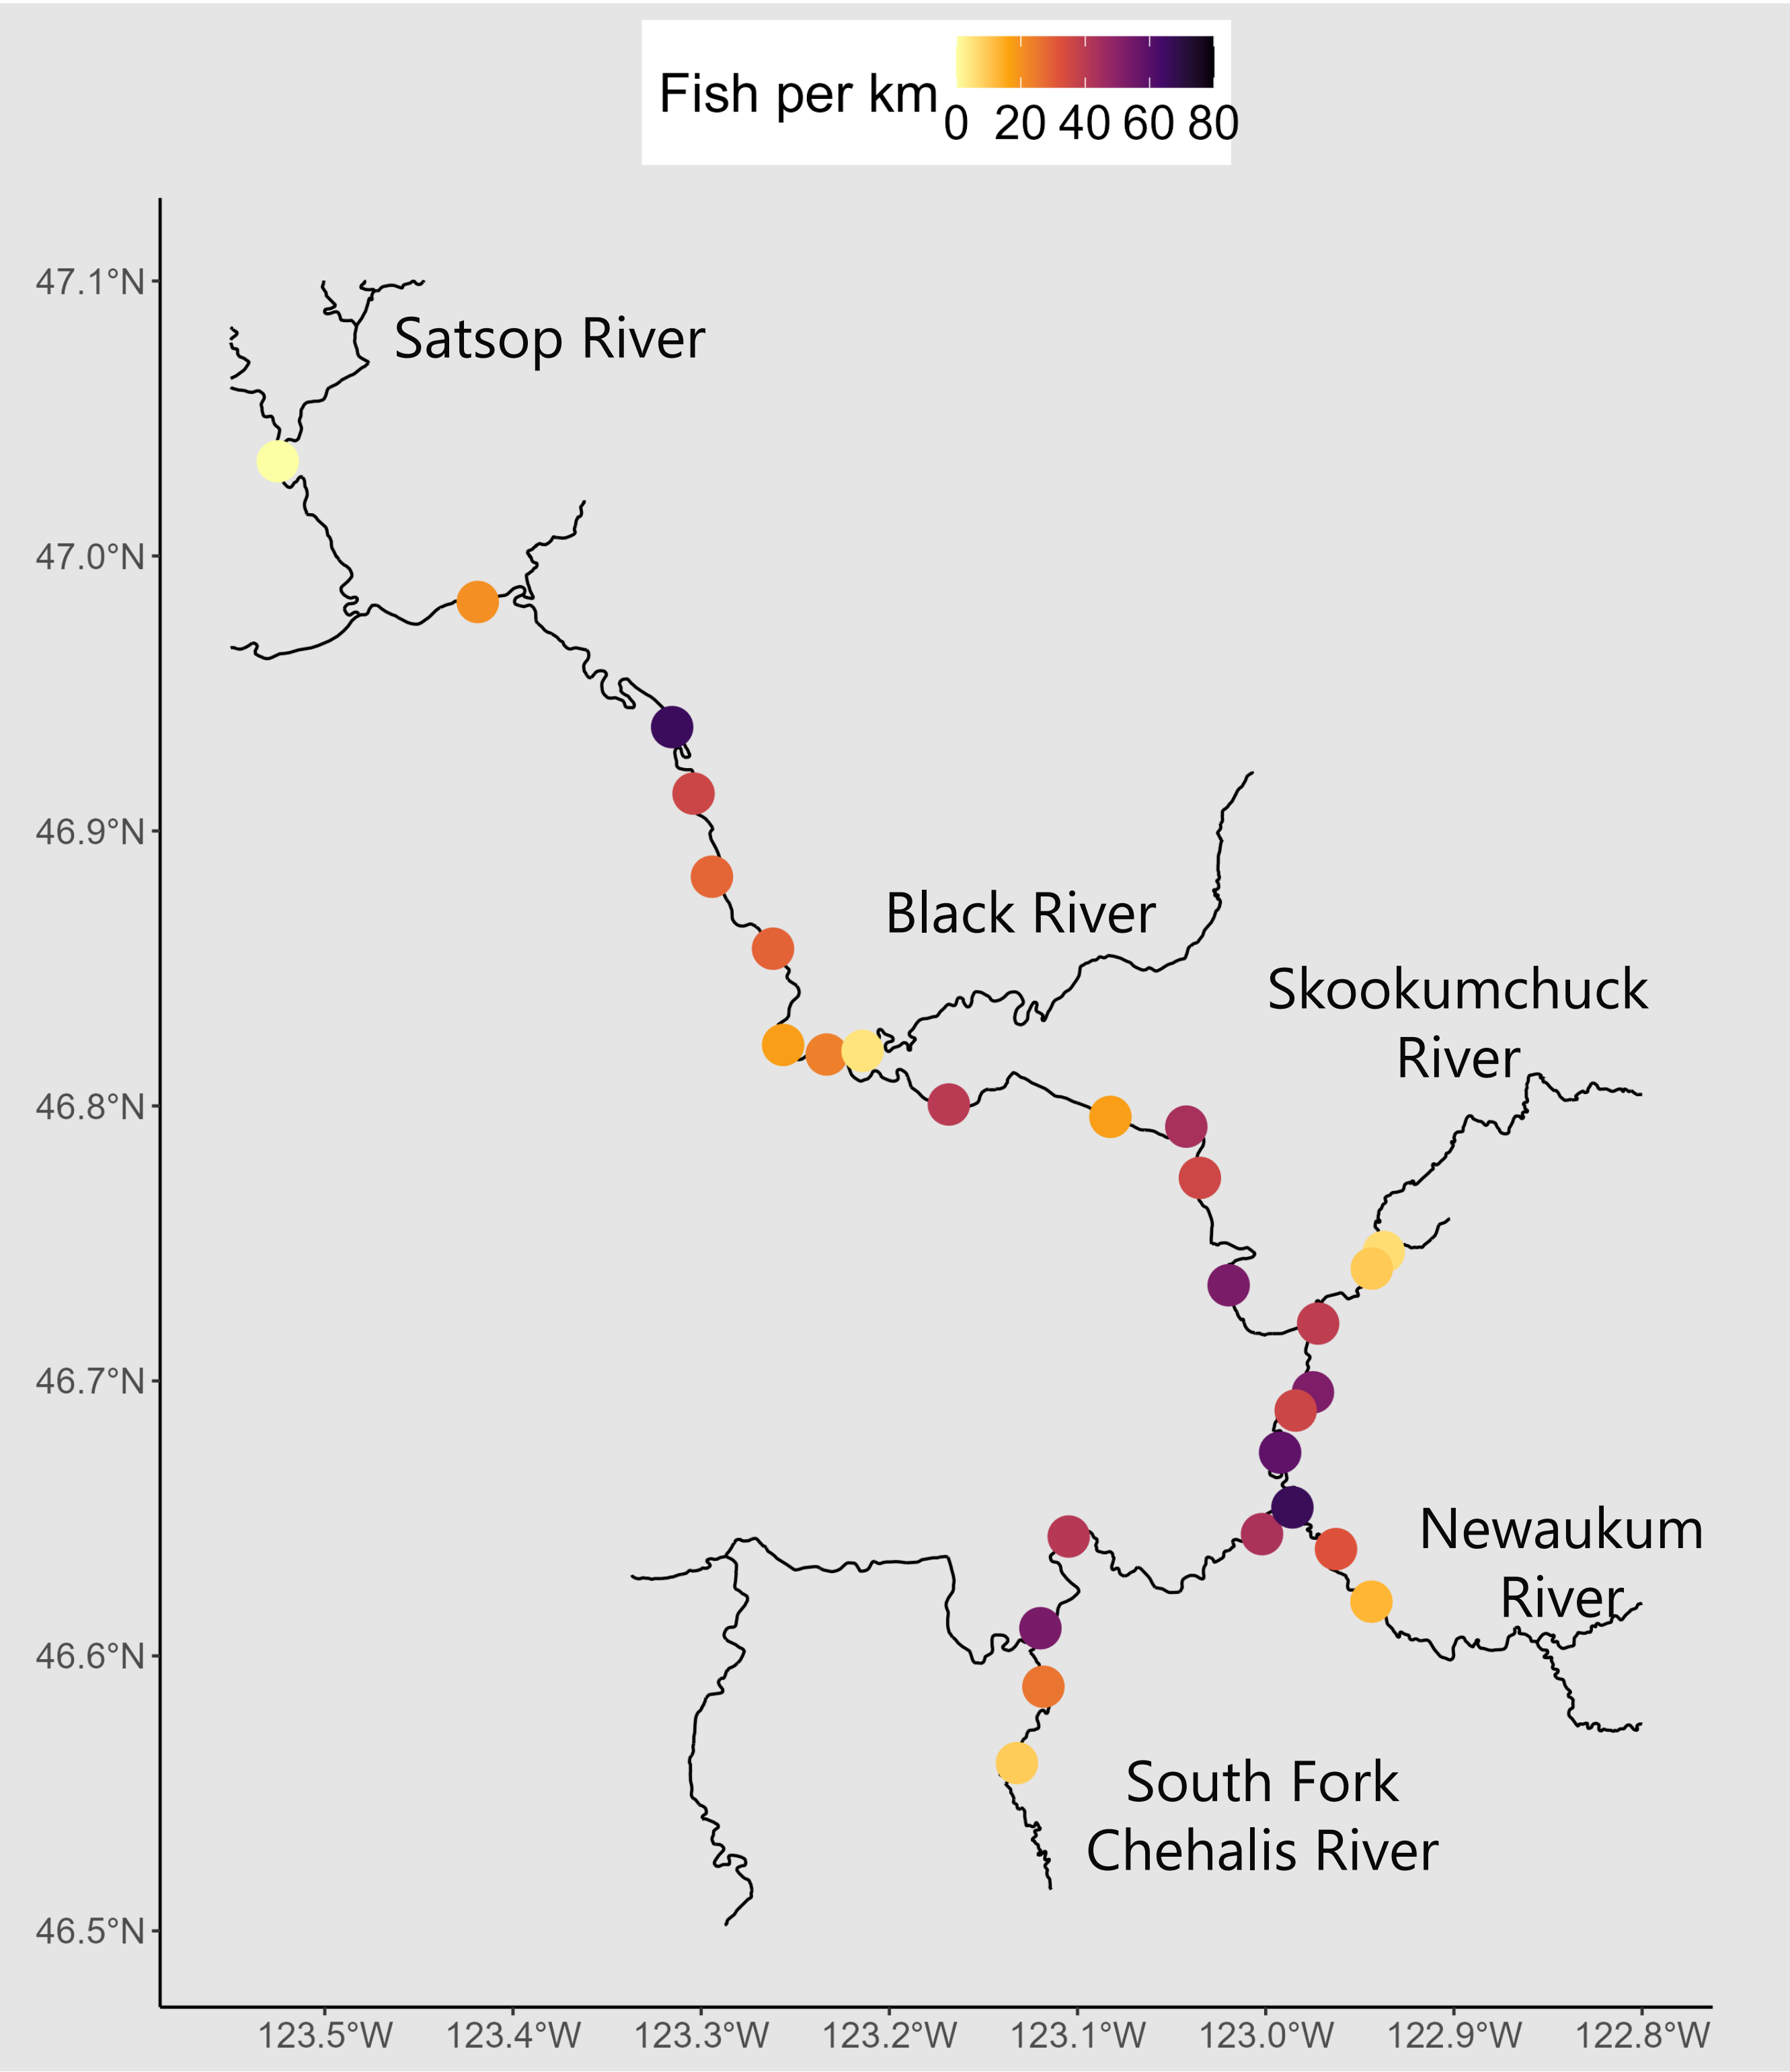

Rock bass
(*Ambloplites rupestris*)

- **Temporal survey (2024):**
- When does spawning occur?
- Important temperature thresholds:
 - Mean daily temperature at first nest = 10.0°C
 - Mean daily temperature of peak spawn = 18.8°C

Where are bass densities high and low?

- Randomized survey throughout known bass distribution
- Characterize spatial variability in density patterns
- Monitor population trends through time
